## Personal Identification Keypad Immobiliser with Anti Hi-Jack

### Anti-Key Theft Device

These days vehicle thieves are not deterred by highly sophisticated built in security and tracking systems. To get the vehicle the thieves are reverting to stealing the keys. By the time the owner realizes that the keys are missing the vehicle is already off the radar screen and ready to be stripped for parts, or given a new identity across borders.

Key Theft

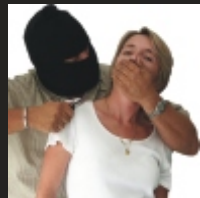

To address this growing problem Sanji have developed the ZX40-KP that requires the driver to enter a personal pin code before the vehicle can be driven. The ZX40-KP has anti-tamper coding and will lock out if it detects that the pin combinations are being tampered with. The driver is given audible feedback via a built in beeper.

An auto back light facility illuminates the keypad at night making it very easy for the driver to enter his pin code. A secure service mode is provided for vehicle service.

Key theft from gym locker

The user pin code can be changed at any time by the driver and Anti Hi-Jack facility can be programmed via the keypad for vehicles in high risk areas. As added security a siren will sound when the unit is tampered with or when the unit is in Hi-Jack mode.

Anti Hi-Jack

The ZX40-KP is SAIA Insurance Approved, is very affordable and can be installed into most vehicles. Contact your local Sanji approved fitment centre for further details.
